1. For the best & up-to-date study & results, please prefer the recommended textbooks/study material only.
2. This book is just a Guide Book/Reference Book published by NEERAJ PUBLICATIONS based on the suggested syllabus by a particular Board/University.
3. These books are prepared by the author for the help, guidance and reference of the student to get an idea of how he/she can study easily in a short time duration. Content matter & Sample answers given in this Book may be Seen as the Guide/Reference Material only. Neither the publisher nor the author or seller will be responsible for any damage or loss due to any mistake, error or discrepancy as we do not claim the Accuracy of these Solutions/Answers. Any Omission or Error is highly regretted though every care has been taken while preparing, printing, composing and proofreading of these Books. As all the Composing, Printing, Publishing and Proof Reading, etc., are done by Human only and chances of Human Error could not be denied. Any mistake, error or discrepancy noted may be brought to the publishers notice which shall be taken care of in the next edition and thereafter as a good gesture by our company he/she would be provided the rectified Book free of cost. Please consult your Teacher/Tutor or refer to the prescribed & recommended study material of the university/board/institute/ Govt. of India Publication or notification if you have any doubts or confusions regarding any information, data, concept, results, etc. before you appear in the exam or Prepare your Assignments before submitting to the University/Board/Institute.
4. In case of any dispute whatsoever the maximum anybody can claim against NEERAJ PUBLICATIONS is just for the price of the Book.
5. The number of questions in NEERAJ study materials are indicative of general scope and design of the question paper.
6. Any type of ONLINE Sale/Resale of "NEERAJ BOOKS" published by "NEERAJ PUBLICATIONS" in Printed Book format (Hard Copy), Soft Copy, E-book on any Website, Web Portals, any Social Media Platforms – Youtube, Facebook, Twitter, Instagram, Telegram, LinkedIn etc. and also on any Online Shopping Sites, like – Amazon, Flipkart, eBay, Snapdeal, Meesho, Kindle, etc., is strictly not permitted without prior written permission from NEERAJ PUBLICATIONS. Any such online sale activity of any NEERAJ BOOK in Printed Book format (Hard Copy), Soft Copy, E-book format by an Individual, Company, Dealer, Bookseller, Book Trader or Distributor will be termed as ILLEGAL SALE of NEERAJ BOOKS and will invite legal action against the offenders.
7. The User agrees Not to reproduce, duplicate, copy, sell, resell or exploit for any commercial purposes, any portion of these Books without the written permission of the publisher. This book or part thereof cannot be translated or reproduced in any form (except for review or criticism) without the written permission of the publishers.
8. All material prewritten or custom written is intended for the sole purpose of research and exemplary purposes only. We encourage you to use our material as a research and study aid only. Plagiarism is a crime, and we condone such behaviour. Please use our material responsibly.
9. All matters, terms & disputes are subject to Delhi Jurisdiction only.

Get books by Post & Pay Cash on Delivery :

If you want to Buy NEERAJ BOOKS by post then please order your complete requirement at our Website www.neerajbooks.com where you can select your Required NEERAJ BOOKS after seeing the Details of the Course, Subject, Printed Price & the Cover-pages (Title) of NEERAJ BOOKS.

While placing your Order at our Website www.neerajbooks.com You may also avail the “Special Discount Schemes” being offered at our Official website www.neerajbooks.com.

No need to pay in advance as you may pay “Cash on Delivery” (All The Payment including the Price of the Book & the Postal Charges, etc.) are to be Paid to the Delivery Person at the time when You take the Delivery of the Books & they shall Pass the Value of the Goods to us. We usually dispatch the books Nearly within 2-3 days after we receive your order and it takes Nearly 3-4 days in the postal service to reach your Destination (In total it take nearly 6-7 days).

QUESTION PAPER

June – 2023

(Solved)

MANAGERIAL ECONOMICS

M.C.O.-21

Time: 3 Hours]

[Maximum Marks: 100

Weightage: 70%

Note: Answer any five questions. All questions carry equal marks.

Q. 1. (a) Define Managerial Economics. Discuss its scope.

Ans. Ref.: See Chapter-1, Page No. 6, Q. No. 1.

(b) “Managerial Economics serves as a link between traditional economics and the decision-making sciences for business decision-making.” Discuss.

Ans. Ref.: See Chapter-1, Page No. 7, Q. No. 2.

Q. 2. (a) Explain the “Law of Demand” with the help of ‘Demand schedule’ and ‘Demand curve.’

Ans. Ref.: See Chapter-4, Page No. 48, Q. No. 1 and Page No. 46, Q. No. 2.

Also Add: Demand Schedule: The same information given by demand curve can also be given in a table or demand schedule. A demand schedule is a table that shows the quantity demanded at each price. For example:

Price (Rs.)	Quantity (Units)
90	40
70	120
50	200
30	280
10	360

Demand Schedule

(b) “Income effect and substitution effect are particularly important in explain the negative slope of demand function.” Discuss.

Ans. The law of demand states that consumers are willing and able to purchase more units of a good or service at lower prices than at higher prices, other things being equal. Two influences, known as the income

effect and the substitution effect, are particularly important in explaining the negative slope of demand functions. The income effect is the influence of a change in a product’s price on real income, or purchasing power. If the price of something that we buy goes down, our income will go farther and we can purchase more goods and services (including the goods for which price has fallen) with a given level of money income. The substitution effect is the influence of a reduction in a product’s price on quantity demanded such that consumers are likely to substitute that good for others that have thus become relatively more expensive.

The concept of demand is often depicted in a graphic model as a demand curve. A demand curve is a graphic illustration of the relationship between price and the quantity purchased at each price. When plotting a graph for demand, the price is measured along the vertical axis and the quantities that would be purchased at various prices are measured along the horizontal axis. The demand curve shows the relationship between the own price of a good and the quantity demanded of it.

Q. 3. Explain the concept of price elasticity of demand. Discuss the determinants of price elasticity of demand.

Ans. Ref.: See Chapter-5, Page No. 53, ‘The Price Elasticity of Demand’ and Page No. 54, ‘Determinants of Price Elasticity’.

Q. 4. Differentiate between demand estimation and demand forecasting. Discuss the important sources of data used in forecasting the demand.

Ans. Ref.: See Chapter-6, Page No. 65, ‘Estimating Demand Using Regression Analysis’, Page No. 66, ‘The Marketing Approach to Demand Measurement’ and Page 68, ‘Forecasting Methods: Regression Models’.

Q. 5. Explain production function. Discuss returns to scale with the help of production function.

Ans. Ref.: See Chapter-7, Page No. 80, 'Production Function' and Page No. 82, 'Returns to Scale'.

Q. 6. "The U-shaped long run average cost curve is explainable in terms of economies of scale and diseconomies of scale." Discuss with the help of graph.

Ans. Ref.: See Chapter-9, Page No. 111, 'Economies and Diseconomies of Scale', Page No. 115, Q. No. 7.

Q. 7. Describe price determination and discuss its types with the help of an example.

Ans. Ref.: See Chapter-12, Page No. 150, 'Introduction', 'Monopolistic Competition', Page No. 151, 'Price and Output Determination in Short Run' and 'Price and Output Determination in Long Run'.

Q. 8. Write short notes on the following:

(a) Discounting principle

Ans. Ref.: See Chapter-2, Page No. 17, 'The Discounting Principle'.

(b) Marginal rate of technical substitution

Ans. The Marginal Rate of Technical Substitution (MRTS) is an economic theory that illustrates the rate at which one factor must decrease so that the same level of productivity can be maintained when another factor is increased. The MRTS reflects the give-and-take between factors, such as capital and labor, that allow a firm to maintain a constant output. MRTS differs from the marginal rate of substitution (MRS) because MRTS is focused on producer equilibrium and MRS is focused on consumer equilibrium.

$$MRTS(L,K) = - \frac{\Delta K}{\Delta L} = \frac{MP_k}{MP_l}$$

Where,

K = Capital

L = Labour

MP = Marginal Product of each point

$\frac{\Delta K}{\Delta L}$ = Amount of Capital that can be reduced

when labour is increased (typically by one unit)

(c) Price leadership

Ans. Price leadership is an alternative cooperative method used to avoid tough competition. Under this method, usually one firm sets a price and the other firms follow. The firm, which is highly efficient, and having low cost can be a price leader or the firm, which is dominant in the market acts as a leader. Whatever the case may be, the firm, which sets the price, is the price leader. We have two forms of price leadership: Dominant price leadership and Barometric price leadership.

In dominant price leadership, the largest firm in the industry sets the price. If the small firms do not conform to the large firm, then the price war may take place due to which the small firms may not be able to survive in the market. It is more or less like a monopoly market structure. This can be seen in the airlines industry in India where the dominant firm Indian Airlines (IA) sets prices and the others Jet and Sahara follow the price changes of IA. Barometric price leadership is said to be the simpler of the two. This normally occurs in the market where there is no dominant firm. The firm having a good reputation in the market usually sets the price. This firm acts as a barometer and sets the price to maximize the profits. Barometric price leadership has been seen in the automobile sector.

(d) Implicit cost

Ans. Implicit Costs: An implicit cost is any cost that has already occurred but not necessarily shown or reported as a separate expense. It represents an opportunity cost that arises when a company uses internal resources toward a project without any explicit compensation for the utilization of resources. This means when a company allocates its resources, it always forgoes the ability to earn money off the use of the resources elsewhere, i.e. no exchange of cash. Examples of implicit costs include a small business owner who may forgo a salary in the early stages of operations to increase revenue.

(e) Short-run cost function

Ans. Ref.: See Chapter-8, Page No. 95, 'Short Run Cost Functions'.

MANAGERIAL ECONOMICS

BLOCK-1: INTRODUCTION TO MANAGERIAL ECONOMICS

Scope of Managerial Economics

INTRODUCTION

Since economics has two primary classifications namely macroeconomics and microeconomics. The basic difference between the both is that macroeconomics is considered as the study of the whole economy, which caters to areas like Gross National Product, Inflation, Unemployment, Exports, Imports, Tax Policies, etc. On the other hand, microeconomics deals with the individual factors in the economy that is firms and individuals.

It is vital to understand that macroeconomics also provides answers to questions pertaining to any changes in investments, employment, prices, exchange rate of the rupee, etc. as these affect the economy at large. Microeconomic data on the other hand forms a part of the data for macroeconomic study of variables. Since only aggregate data of the above mentioned variables is considered, however, the aggregate also includes the data for changes in output of a number of individual firms, plus the consumer's consumption levels and their choice based on any change in the prices of the particular goods and services.

It is on the basis of the importance that the macroeconomics and microeconomics issues command that one gets the attention in media and newspapers while the latter is taken care of in the day-to-day handlings of the manager.

It is said that in order to take appropriate managerial decisions it is important to have an analytical perspective blended with rational decision-making skills. These can be enhanced with the understanding of the applications of Managerial Economics.

Managerial Economics falls under the micro-economics section, which caters to a wide variety of

topics that may range from risk, demand, supply to the understanding of the cost and market structure. Thus, in layman's language it can be said that market is a place where individuals and various products come in contact with each other and the prices of the products are determined. Therefore, it is important to keep the profit maximization quotient for the firm producing the products in mind. The entity, which makes available the factors of production in the form of produced goods and services, is termed as a firm.

The main aim of economics is to have the appropriate allocation of resources, so that they can be utilized to their maximum capacity. It is with the help of economics that managers are able to take the optimizing decisions keeping in mind the alternatives available vis-à-vis the best option for the resources.

The firms operate in the market whereby the forces of demand and supply, inflation, government policies affect it. Thus, it is with the help of managerial economics that the firm is able to react to such changes in the economic environment and predict and devise the best possible alternative, so that their objectives are also met.

CHAPTER AT A GLANCE

FUNDAMENTAL NATURE OF MANAGERIAL ECONOMICS

A close relationship between management and economics has led to the development of managerial economics. Koontz and O'Donnell define management as the creation and maintenance of an internal environment in an enterprise where individuals, working together in groups, can perform efficiently and effectively towards the attainment of group goals. Thus, management is:

- Coordination
- An activity or an ongoing process
- A purposive process
- An art of getting things done by other people.

The three choice problems that have become the three central issues of an economy are:

1. What to produce?
2. How to produce?
3. For whom to produce?

Economics has developed several concepts and analytical tools to deal with the question of allocation of scarce resources among competing ends. There are three ways by which this can be achieved. One, entirely by the market mechanism, two entirely by the government or finally and more reasonably by a combination of the first two approaches. Realistically all economies employ the last option, but the relative roles of the market and government vary across countries. According to the central deduction of economic theory, under certain conditions, markets allocate resources efficiently. The theory says that markets will produce an outcome such that, given the economy's scarce resources, it is impossible to make anybody better-off without making somebody else worse-off.

According to the central deduction of economic theory, under certain conditions, markets allocate resources efficiently. 'Efficiency' has a special meaning in this context.

In neoclassical economics, market failure is a situation in which the allocation of goods and services by a free market is not Pareto efficient, often leading to a net loss of economic value. Market failures can be viewed as scenarios where individuals' pursuit of pure self-interest leads to results that are not efficient – that can be improved upon from the societal point of view. The first known use of the term by economists was in 1958, but the concept has been traced back to the Victorian philosopher Henry Sidgwick. Market failures are often associated with public goods, time-inconsistent preferences, information asymmetries, non-competitive markets, principal – agent problems, or externalities.

The existence of a market failure is often the reason that self-regulatory organizations, governments or supra-national institutions intervene in a particular market. Economists, especially microeconomists, are often concerned with the causes of market failure and possible means of correction. Such analysis plays an

important role in many types of public policy decisions and studies.

However, government policy interventions, such as taxes, subsidies, wage and price controls, and regulations, may also lead to an inefficient allocation of resources, sometimes called government failure. Most mainstream economists believe that there are circumstances (like building codes or endangered species) in which it is possible for government or other organizations to improve the inefficient market outcome. Several heterodox schools of thought disagree with this as a matter of ideology.

SCOPE OF MANAGERIAL ECONOMICS

It is important to understand the scope and importance that Managerial Economics carries to the firms. It helps them in solving the choice and allocation of scarce resources issues. It helps the firm to identify the activities to which the scarce resources need to be allocated for its proper functioning. The scope of Managerial Economics is not limited to just allocation of resources, it also provides a platform for rational decision-making and forward planning concepts in the managerial decisions. The managers are responsible for appropriate resource allocation, inventory, price and investment issues, which can be taken care of with the help of Managerial Economics concepts.

The aim of the economic activity is to strike a balance between ends and means due to the scarcity of resources. It can be said that the center of economic activity is decision making by management, as it involves making a choice among the various alternative courses of action. Thus, the best economic choices, keeping in mind the objectives and obstacles are the outcome of best decision-making skills. The various tools that come handy to the management for taking rational decisions may include micro-macro, partial-general equilibrium, and positive-normative analysis. Therefore, it can be said that Managerial Economics acts as a link between traditional economics and the decision-making sciences for the business firms. There are four groups of problem in both decisions-making and forward planning.

Resource Allocation: Scarce resources have to be used with utmost efficiency to get optimal results. These include production programming and problem of transportation, etc.

Inventory and Queuing Problem: Inventory problems involve decisions about holding of optimal levels of stocks of raw materials and finished goods

over a period. These decisions are taken by considering demand and supply conditions. Queuing problems involve decisions about installation of additional machines or hiring of extra labour in order to balance the business lost by not undertaking these activities.

Pricing Problem: Fixing prices for the products of the firm is an important decision-making process.

Investment Problem: Forward planning involves investment problems. These are problems of allocating scarce resources over time.

APPROPRIATE DEFINITIONS

Managerial economics is a branch of economics involving the application of economic methods in the managerial decision-making process. And, Managerial Economics is the integration of economic theory with business practice for the purpose of facilitating Decision making and forward planning by the Management.

According to Edwin Mansfield, Economics Professor, University of Pennsylvania, "Managerial economics is concerned with the application of economic concepts and economic analysis to the problems of formulating rational managerial decisions."

According to Hailstones and Rothwel, "Managerial economics is the application of economic theory and analysis to practice of business firms and other institutions."

MANAGERIAL ECONOMICS AND OTHER DISCIPLINES

Managerial economics has its relationship with other disciplines for propounding its theories and concepts for managerial decision making. Essentially it is a branch of economics. Managerial economics is closely related to certain subjects like statistics, mathematics, accounting and operations research. Managerial economics helps in estimating the product demand, planning of production schedule, deciding the input combinations, estimation of cost of production, achieving economies of scale and increasing the returns to scale. It also includes determining price of the product, analyzing market structure to determine the price of the product for profit maximization, which helps them to control and plan capital in an effective manner.

Managerial economics has a very important role to play by helping managements in successful decision-making and forward planning. To discharge his role successfully, a manager must recognize his respon-

sibilities and obligations. There is a growing realization that the managers contribute significantly to the profitable growth of the firms. We can conclude that managerial economics consists of applying economic principles and concepts towards adjusting with various uncertainties faced by a business firm.

ECONOMIC ANALYSIS

An economic analysis is a process in which business owners gain a clear picture of the existing economic climate, as it relates to their company's ability to thrive. Economists, statisticians, and mathematicians often carry out this analysis on behalf of for-profit and nonprofit businesses. an evaluation of managerial decisions through concepts, precepts, tools and techniques of economic analysis of the following types:

Micro and Macro Analysis: In micro-analysis the problem of choice is focused on single individual entities like a consumer, a producer, a market, etc. Macro analysis deals with the problem in totality like national income, general price level, etc.

Partial and General Equilibrium Analysis: In partial equilibrium analysis, we concentrate on a single market, in isolation from the rest of the economy. We analyse in detail a particular market or a set of markets neglecting everything else. For instance, when we want to study the market for wheat in detail, we do not bother about other markets in the economy. Such an analysis is based on ceteris paribus assumption. Demand and supply models of price determination of a good are based on partial equilibrium analysis. It ignores various linkages and inter-relationships that might exist between different markets. On the other hand, in general equilibrium analysis we analyse simultaneously all the markets in the economy.

Static, Comparative Static and Dynamic Analysis: Static and dynamic modes of analysis can be differentiated in more than one ways. According to one definition, in a static model (theory) the variables (cause effect) are not dated. The demand-supply model of market behaviour is a static model. The model that demand depends on own price, supply depends on own price, with an equilibrium condition that demand must equal supply, time does not enter into the picture at all and the variables are all undated. According to this definition, a dynamic model would be one where the relevant variables are dated. If the demand-supply model is restructured as follows, then the model would become dynamic according to this criterion.

Positive and Normative Analysis: In positive economic analysis, the problem is analyzed in objective

terms based on principles and theories. In normative economic analysis, the problem is analyzed based on value judgement (norms).

BASIC CHARACTERISTICS:

DECISION- MAKING

Managerial Economics serves as ‘a link between traditional economics and the decision making sciences’ for business decision-making. The basic characteristics of managerial economics can now be enumerated as:

- It is concerned with “decision-making of an economic nature.”
- It is “micro-economic” in character.
- It largely uses that body of economic concepts and principles, which is known as “theory of the firm.”
- It is “goal oriented and prescriptive”
- Managerial economics is both “conceptual and metrical”. It includes theory with measurement.

ACTIVITIES

Q. 1. Development of Managerial Economics is the result of close interrelationship between management and economics. Discuss.

Ans. As according to McNair and Meriam, “Managerial Economics is the use of economic modes of thought to analyze business situations.” Based on this definition of Managerial Economics, the relationship between economics and management may be justified. The management provides the guidance, leadership as well as the way to appropriately channelize the efforts of a group of individuals towards the attainment of some common objective. While economics, provides for analyzing and providing solution to the big question of scarcity of resources.

According to Koontz and O’Donell, “Management is the creation and maintenance of an internal environment in an enterprise where individuals, working together in groups, can perform efficiently and effectively towards the attainment of group goals.” Therefore, management is co-ordination, an ongoing activity, a purposive process and the manner of getting work done through others.

While economics provides for answers to the basic questions such as what should the firm produce, the production process, i.e. how to produce and the third, for whom to produce. It is in these answers that relationship between management and economics lies. As the firm wants to produce so that it delivers goods and services to the individuals and thereby attain

objective and also derive some profits as well. For which certain factors of production in the form of material, machine, labour, etc. need to be deployed. And it is also a known fact that such resources are scarce in nature, as compared to the unlimited and insatiable human wants. Thus, here economics comes as a savior as provides for the concepts and tools to determine the best possible alternative for the factors of production.

Q. 2. Which statement is true of the basic economic problem?

- (i) **The problem will exist as long as resources are limited and desires are unlimited.**
- (ii) **The problem exists only in less developed countries.**
- (iii) **The problem will disappear as production expands.**
- (iv) **The advancement of technology will cause the problem to disappear.**

Ans. (i) The problem will exist as long as resources are limited and desires are unlimited.

As the three choice problems faced by an economy are:

- (a) What to produce?
- (b) How to produce?
- (c) For whom to produce?

These problems arise due to the scarcity of resources. Managerial economics caters to the fundamental question of scarcity of resources by providing the organization with appropriate analysis of the various activities undertaken by the organization vis-à-vis the best possible alternative for the effective utilization of the factors of production.

As the scarcity of resources results from the following issues, namely:

- (a) Human wants being unlimited and insatiable.
- (b) Limited economic resources available to satisfy the wants and desires.

The effective and efficient use of the available resources is thus very important, that is the resources need to be utilized to their maximum capacity so that the profits are enhanced and maximum returns are available to the organization as a whole. The purpose of this ongoing process is to maximize the returns and thereby the profits.

Q. 3. Why is decision-making by any management truly economic in nature?

Ans. Mostly managerial decisions are economic in nature as the firms’ management is faced with the “problems of choice” in simple words various
