**Notes:**

1. For the best & up-to-date study & results, please prefer the recommended textbooks/study material only.
2. This book is just a Guide Book/Reference Book published by NEERAJ PUBLICATIONS based on the suggested syllabus by a particular Board/University.
3. The information and data etc. given in this Book are from the best of the data arranged by the Author, but for the complete and up-to-date information and data etc. see the Govt. of India Publications/textbooks recommended by the Board/University.
4. Publisher is not responsible for any omission or error though every care has been taken while preparing, printing, composing and proof reading of the Book. As all the Composing, Printing, Publishing and Proof Reading, etc. are done by Human only and chances of Human Error could not be denied. If any reader is not satisfied, then he is requested not to buy this book.
5. In case of any dispute whatsoever the maximum anybody can claim against NEERAJ PUBLICATIONS is just for the price of the Book.
6. If anyone finds any mistake or error in this Book, he is requested to inform the Publisher, so that the same could be rectified and he would be provided the rectified Book free of cost.
7. The number of questions in NEERAJ study materials are indicative of general scope and design of the question paper.
8. Question Paper and their answers given in this Book provide you just the approximate pattern of the actual paper and is prepared based on the memory only. However, the actual Question Paper might somewhat vary in its contents, distribution of marks and their level of difficulty.
9. Any type of ONLINE Sale/Resale of "NEERAJ IGNOU BOOKS/NEERAJ BOOKS" published by "NEERAJ PUBLICATIONS" on Websites, Web Portals, Online Shopping Sites, like Amazon, Flipkart, Ebay, Snapdeal, etc. is strictly not permitted without prior written permission from NEERAJ PUBLICATIONS. Any such online sale activity by an Individual, Company, Dealer, Bookseller, Book Trader or Distributor will be termed as ILLEGAL SALE of NEERAJ IGNOU BOOKS/NEERAJ BOOKS and will invite legal action against the offenders.
10. Subject to Delhi Jurisdiction only.

© Reserved with the Publishers only.

**Spl. Note:** This book or part thereof cannot be translated or reproduced in any form (except for review or criticism) without the written permission of the publishers.

**Get Books by Post (Pay Cash on Delivery)**

If you want to Buy NEERAJ BOOKS for IGNOU Courses then please order your complete requirement at our Website [www.neerajbooks.com](http://www.neerajbooks.com). where you can select your Required NEERAJ IGNOU BOOKS after seeing the Details of the Course, Name of the Book, Printed Price & the Cover-pages (Title) of NEERAJ IGNOU BOOKS.

While placing your Order at our Website [www.neerajbooks.com](http://www.neerajbooks.com) You may also avail the Various "Special Discount Schemes" being offered by our Company at our Official website [www.neerajbooks.com](http://www.neerajbooks.com).

We also have "Cash on Delivery" facility where there is No Need To Pay In Advance, the Books Shall be Sent to you Through "Cash on Delivery" service (All The Payment including the Price of the Book & the Postal Charges etc.) are to be Paid to the Delivery Person at the time when You take the Delivery of the Books & they shall Pass the Value of the Goods to us. We usually dispatch the books Nearly within 3-4 days after we receive your order and it takes Nearly 4-5 days in the postal service.

# QUESTION PAPER-1

(Solved)

## PUBLIC ECONOMICS

Time: 3 Hours ]

[ Maximum Marks: 100

Note: Attempt any five questions. All questions carry equal marks.

**Q. 1. What is the essence of Rawlsian approach to social welfare?**

**Ans. Ref.:** See Chapter-1, Page No. 4, Q. No. 1.

**Q. 2. How does Rawls define 'primary goods'? What does he propose to reduce 'social and economic inequities' in societies?**

**Ans. Ref.:** See Chapter-3, Page No. 22, Q. No. 5.

**Q. 3. How are GPGs determined? In what way this deterministic feature useful?**

**Ans. Ref.:** See Chapter-6, Page No. 46, Q. No. 9.

**Q. 4. Distinguish between collective decision-making and individual decision-making.**

**Ans.** Individual choice presumes existence of market and thus the presence of prices. Preference for commodities is subjective to the individual while prices are objective. It implies that the same for everybody (except for public goods). While choice for individuals may also be made by others like the family members, the dominant mode of economic analysis has been individual choice by individuals based on their preference orderings in a market. It means that individual makes the decision for himself. Choice for society with consideration of preferences of individual members of the society is referred to as collective decision-making. Collective decision-making is different as market is not the arbiter here. There are different situations where mechanisms other than market are involved. Some of them can be illustrated in terms of market failure and government intervention. But there are situations such as achieving just distribution of resources where market is a poor

guide. A choice as to who will represent them in a body like legislature is a social choice. If based on individual social preferences, choice is made through collective decision-making. Choice might differ, depending on persuasions across societies. For example, whether a village should have a tube well or a dug well, a technical school or a general school, an allopathic dispensary or an ayurvedic dispensary when only one of them is attainable falls under collective decision-making or choice. Several combinations of well, school, and dispensary (in fact,  $2 \times 2 \times 2 = 8$ ) can be created with extreme alternatives of none and all. With each society having a preference order of these eight social alternatives, majority voting rule becomes one of the collective decision-making rules.

**Q. 5. What is the use of mechanism design theory?**

**Ans. Ref.:** See Chapter-9 Page No. 67, Q. No. 3.

**Q. 6. What is Arthur Laffer's point on income tax? Why is it not practically useful?**

**Ans. Ref.:** See Chapter-10, Page No. 74, Q. No. 5.

**Q. 7. Why has the contribution of State Public Sector Enterprises been negative?**

**Ans. Ref.:** See Chapter-12, Page No. 89, Q. No. 13.

**Q. 8. Distinguish between the 'net' and 'gross' versions of fiscal and primary deficits.**

**Ans. Ref.:** See Chapter-15, Page No. 110, Q. No. 3.

**Q. 9. Specify the expression for the monopoly power of the firm, when the firms are of equal size. On which index is this based and what does it connote?**

**Ans. Ref.:** See Chapter-17, Page No. 123, Q. No. 5.

**Q. 10. Write short notes on the following:**

**(a) Allocation**

**Ans.** Allocation function of government includes the processes that guides the maximum possible utilisation of endowments. Goods have multiple dimensions. Besides the technology dimension, two other allied dimensions are 'access' and 'availability'. Access refers to whether a producer/supplier could exclude anyone's access and availability is whether consumption by one could reduce its availability to others. In the case of a pure public good: (i) There is no denying its access to any one, and (ii) Consumption

by one does not reduce its availability to others. In case of private good, governments enact laws and frame rules to deal with mismatch in quantities or prices of supply and demand schedules. Governments may offer subsidies or levy taxes to affect the supply and demand. In case of public goods, governments may undertake production or procuring them from private producers.

**(b) Federalism**

**Ans. Ref.:** See Chapter-19, Page No. 135, 'Federalism'.

**(c) Fiscal Policy**

**Ans. Ref.:** See Chapter-21, Page No. 149, 'Fiscal Policy'.

**(d) Lorenz Curve**

**Ans. Ref.:** See Chapter-22, Page No. 159, 'Lorenz Curve'.

# PUBLIC ECONOMICS

## BLOCK-I : BASIC CONCEPTS OF PUBLIC ECONOMICS

### Welfare Foundations of Economic Policies

#### INTRODUCTION

Policy interventions by the government is needed for welfare of individuals in both competitive market economy as well as command economy. In this chapter, we will study about the welfare foundations of economic policies in a competitive market economy.

#### CHAPTER AT A GLANCE

#### PUBLIC ECONOMICS AND WELFARE ECONOMICS: INTERFACE

Public economics provide understandings for policy interventions by the government to rectify any distortion in the decision-making of various agents. The distortions may be in monopoly or monopsony power for sellers or buyers, taxes on or subsidies, existence of public goods and external economies or diseconomies. In such cases, the individual agents fail to achieve optimal welfare levels. Thus, the aggregate welfare of the economy also fails to attain its optimum.

In such cases, the government devises suitable policy interventions to correct the outcome leading the economy to achieve its maximum. Thus, welfare considerations become the backbone of all economic policies. Public economics which focuses on representative individual buyer or seller overlaps with welfare economics. In public economics, welfare is measured as the sum of consumer's surplus in terms of utility, producer's surplus in terms of profit and government's surplus in terms of net tax revenue. In public economics, any kind of surplus is welfare enhancing.

#### CONCEPT OF WELFARE

The economic policies in a competitive market economy start with an assumption that individuals derive utility from their own consumption of goods and services. The social welfare function is thus individual centric.

#### Social Welfare Function (SWF)

In welfare economics, a social welfare function is a function that ranks social states as less desirable, more desirable, or indifferent for every possible pair of social states. Inputs of the function include any variables considered to affect the economic welfare of a society. In using welfare measures of persons in the society as inputs, the social welfare function is individualistic in form. One use of a social welfare function is to represent prospective patterns of collective choice as to alternative social states. The social welfare function provides the government with a simple guideline for achieving the optimal distribution of income. It is explained diagrammatically in Q&A section.

#### Utilitarian SWF

According to Jeremy Bentham, social welfare would be viewed as the simple addition of individual valuations of utility. However, individual utilities are not readily comparable or additive.

#### Scitovsky-Bergson's SWF

It shows that if a poor individual loses utility, the rich gains more utility in order that the society can be indifferent for the re-distribution. A transfer of income from the rich to the poor increases the utility values more for the poor. It is explained diagrammatically in Q&A section.

#### Rawlsian SWF

The Rawlsian approach to social welfare measures the welfare of a society by the well-being of the worst-off individual (the maximin criterion). A utilitarian measures the welfare of a society by the sum of the individuals' utilities. Rawls accepts that utilitarianism is the single most important ethical theory with which he has to contend. It is further explained diagrammatically in Q&A section.

#### EFFICIENCY AND PARETO OPTIMALITY

Pareto efficiency or Pareto optimality is a situation where no individual or preference criterion can be better

## 2 / NEERAJ : PUBLIC ECONOMICS

off without making at least one individual or preference criterion worse off or without any loss thereof. The concept is named after Vilfredo Pareto (1848-1923), Italian civil engineer and economist, who used the concept in his studies of economic efficiency and income distribution. Edgeworth's original two-axis depiction was developed into the now familiar box diagram by Pareto in his 1906 *Manual of Political Economy* and was popularized in a later exposition by Bowley. The modern version of the diagram is commonly called the Edgeworth-Bowley box. Edgeworth-Bowley box is a graphical representation of a market with just two commodities and two consumers. The main use of the Edgeworth box is to introduce topics in general equilibrium theory in a form in which properties can be visualised graphically. It is further explained with diagram in Q&A section.

### UTILITY POSSIBILITY FRONTIER

A utility possibility frontier shows the maximum amount of one person's utility given each level of utility attained by all others in society. The frontier can also be explained as the utility maximisation by consumers given an economies' endowment and technology. Points on the curve are, by definition, Pareto efficient, while points that do not lie on this curve are not Pareto efficient. The curve also represents a social optimum, as any point on the curve is a maximisation of the given social welfare function. However, based on the extent of society's preferences for an equal distribution of real income, a point off the curve may be preferred. All points on or below the Utility-Possibility Frontier are attainable by society; all points above it are not attainable. The utility-possibility frontier is derived from the contract curve. The Utility-Possibility Frontier (UPF) is the upper frontier of the utility possibilities set, which is the set of utility levels of agents possible for a given amount of output, and thus the utility levels possible in a given consumer Edgeworth box. The slope of the UPF is the trade-off of utilities between two individuals. The absolute value of the slope of the utility-possibility frontier showcases the utility gain of one individual at the expense of utility loss of another individual, through a reallocation of outputs. It is further explained with diagram in Q&A section.

### Compensation Principles

Compensation principles are used when some individuals lose out due to re-distribution. Under the compensation principles, the gainers compensate the losers and still have a net gain.

The three most well-known compensation principles are:

**The Kaldor Criterion:** Allocation  $\alpha$  is preferred to allocation  $\beta$  if the gainers from a re-distribution from  $\alpha$  to  $\beta$  can compensate the losers but still stay gainers.

**The Hicks Criterion:** Allocation  $\alpha$  is preferred to allocation  $\beta$  if the losers cannot profitably bribe the gainers in not making such a re-distribution.

**The Scitovsky Criterion:** Allocation  $\alpha$  is preferred to allocation  $\beta$  if the gainers could compensate the losers to make the change while the losers cannot profitably bribe the gainers in not making the change. It is also called as Scitovsky's double criteria because it combines both the principles of Kaldor and Hicks.

### APPLICATION OF WELFARE CRITERIA IN PUBLIC ECONOMICS

The most efficient solution to distribution of goods depends on meeting *Pareto Optimality* condition. If some Pareto optimal situation is preferred among the many possible ones, we need to apply some compensation principle. Some application of these principles in specific economic contexts are discussed below:

#### Monopoly Power

In case of monopoly by a seller, there will be inefficient outcome and the consumers will lose some utility. Policy intervention by the government can solve this. In case the monopoly is a 'natural monopoly', the government can control the utilities. If the monopoly is for other reasons like patents, government can constitute price regulatory bodies to oversee the pricing. This ensures monopolist cannot earn too high profits by taking away some utility from the consumers. A cartel may be formed by some producers. The government can subsidise the consumers.

If such a situation arises on the buyers side as well. For example, if the price of labour becomes much lower than competitive wages and cause the workers to lose utility to the buyers of their labour services, government may intervene to legally enforce minimum wage. Such cases also occur when the labour market becomes unorganised so that buyers wield considerable bargaining power.

#### Public Goods

In case of public goods, competitive market mechanism does not work and the Edgeworth-Bowley diagram does not provide a correct solution. Defence force of the country service is enjoyed equally by all citizens of a nation can be an example. In the absence of a market determined price, the optimal point on the

contract curve or utility possibility frontier cannot be determined rendering welfare based Pareto optimal criterion redundant. In such cases, government has to devise a tax system that shows true preferences of the individuals towards the public good. The taxes will act similar to price but determination of correct tax rate is difficult.

#### **Externalities**

Externalities affects an individual's utility but utility of many others. Externalities may be positive and negative. Positive externalities increase the utility of all others in that neighbourhood. Negative externalities adversely affect others. Thus, the indifference curves of one individual are not independent of movement in such curves of another individual. As a result, the whole mechanism by which optimal welfare is determined becomes questionable. Since the individuals (or firms) who create such externalities in many cases think about their private costs and benefits, there would be significant difference between private and social benefits. In such cases, the government can intervene through tax and subsidies.

#### **Imperfect Information**

The consumers get utility from consumption of goods with perfect information of the product so that the pricing of the goods does not deviate from its competitive optimum nor the quality of the product causes lower than the desired utility from the consumption of the goods. In such cases, government needs to intervene for course correction. Drug control by government agencies is an example. The US Food and Drug Administration oversees the introduction and the efficacy of all drugs in United States and sets a benchmark for the world. Another example is information provided by the weather bureau of a country which helps sellers and buyers in various ways.

### **CHECK YOUR PROGRESS**

**Q. 1. What is the basic tenet of Public Economics?**

**Ans.** Public economics provides a framework for thinking about whether the government should take part in economic markets and to what extent it should do so. The welfare in an economy is measured as the sum of consumers surplus, producers surplus and the government's surplus. Any kind of surplus is welfare enhancing. Keeping this in view, the government make policies in an economy. The government also intervene when there is a failure in market because of various factors like monopoly, externalities and public goods.

### **WELFARE FOUNDATIONS OF ECONOMIC POLICIES / 3**

**Q. 2. Why is Social Welfare Function said to be 'individualistic'?**

**Ans.** Social Welfare Function is individualistic because the welfare of the society depends on the individual utility levels. In a competitive market economy, it is assumed that individuals derive utility from their own consumption and are not affected by consumption of others. Thus, in social welfare function other aspects such as social networks prevalent in many developing economies are ignored. In social networks, the actions of groups affect individual's utility. Thus, the predominant ideas in public economics are governed by welfare concepts rooted in individualistic utility levels.

**Q. 3. How does the Utilitarian Social Welfare Function deviates from its individual centric character?**

**Ans.** In utilitarian Social Welfare Function as suggested by Jeremy Bentham, the gain and loss of the individuals are independent of their wealth positions. On the other hand, in individualistic SWF, the welfare of the society depends on the individual utility levels. It is assumed that in a competitive market economy, individuals derive utility from their own consumption and are not affected by consumption of others.

**Q. 4. Why is the Rawlsian Welfare Function L-shaped?**

**Ans.** Rawlsian Welfare Function is L-shaped because the fixing the utility of the poor will cause no rise in social welfare no matter how much utility is increased for the rich. It shows the welfare of the society depends on the welfare of the worst-off individual. Even if the rich gains, the welfare of the society will not increase if the poor remains the same.

**Q. 5. Define a contract curve.**

**Ans.** The contract curve is the set of points representing final allocations of two goods between two people that could occur as a result of mutually beneficial trading between those people given their initial allocations of the goods. All the points on this locus are Pareto efficient allocations, meaning that from any one of these points there is no reallocation that could make one of the people more satisfied with his or her allocation without making the other person less satisfied. The contract curve is the subset of the Pareto efficient points that could be reached by trading from the people's initial holdings of the two goods.

**Q. 6. How are Utility Possibility Frontier and Contract Curve related?**

**Ans.** The utility possibilities frontier represents all allocations that are efficient and shows the level of

4 / NEERAJ : PUBLIC ECONOMICS

satisfaction that each person achieves when he has traded to an efficient outcome, on the contract curve. In an Edgeworth box the contract curve is the set of tangency points between the indifference curves of the two consumers. It is termed the contract curve because the outcome of negotiation about trade between two consumers should lead to an agreement that has an outcome on the contract curve. The competitive equilibrium of an economy is always located on the contract curve.

**Q. 7. How does the second welfare theorem envisage scope for policy intervention by the government?**

**Ans.** The second welfare theorem says in a competitive market economy, given that the indifference curves of individuals satisfy the standard properties, for any initial distribution of goods among the individuals, any point on the utility possibility frontier is a point of equilibrium. This implies that if the existing equilibrium point is not the one which is desirable from society's point of view, then a re-distribution of income can lead to a more desirable outcome at some other Pareto optimal point.

**Q. 8. State the limitation of compensation principles.**

**Ans.** The limitation of the compensation principles is that they are all potential and not actual. It is possible that the gainers do not compensate the losers in reality or the losers do not try to thwart the move of re-distribution though they could.

**Q. 9. Why does the government need to intervene in case of a patented product?**

**Ans.** The government needs to intervene in case of a patented product because there may be monopoly by a seller and there will be inefficient outcome and the consumers will lose some utility. Policy intervention by the government can maximize the utilities for the consumers.

**Q. 10. What problem does a public good pose for welfare maximisation?**

**Ans.** For public goods, competitive market mechanism does not work and the Edgeworth-Bowley diagram does not offer a correct solution. Take Defence force as an example. The service is enjoyed equally by all citizens of a nation can be an example. In the absence of a market determined price, the optimal point on the contract curve or utility possibility frontier cannot be determined rendering welfare based Pareto optimal criterion redundant. In such cases, government has to devise a tax system that shows true preferences of the individuals towards the public good.

**Q. 11. In case of household enterprises being set up in densely populated area, what is expected in terms of policy intervention?**

**Ans.** In case of household enterprises being set up in densely populated area, the government can intervene through tax. The reason: Such an enterprise is an externality which adversely affects others. Thus, the indifference curves of one individual are not independent of movement in such curves of another individual. As a result, the whole mechanism by which optimal welfare is determined becomes questionable. Since the individuals (or firms) who create such externalities in many cases think about their private costs and benefits, there would be significant difference between private and social benefits.

**Q. 12. For what reason do drugs need regulation?**

**Ans.** Drugs need regulation because of imperfect information. The consumers get utility from consumption of goods with perfect information of the product. Government needs to intervene for course correction.

### **OTHER IMPORTANT QUESTIONS**

**Q. 1. What is the essence of Rawlsian approach to social welfare?**

**Ans.** The Rawlsian approach to social welfare, built on the foundation of the "Veil of Ignorance", measures the welfare of a society by the well-being of the worst-off individual (the maximin criterion). A utilitarian measures the welfare of a society by the sum of the individuals' utilities. Starting from such different perspectives, the optimal income distribution chosen by a Rawlsian social planner usually differs from the optimal income distribution chosen by a utilitarian social planner. Rawls accepts that utilitarianism is the single most important ethical theory with which he has to contend. In utilitarian ethics, the maximization of general welfare may require that one person's good is sacrificed to serve the greater good of the group of people. Rawlsian ethics, however, would never allow this. As Rawls' *Difference Principle* states, social and economic inequalities should be tolerated only when they are expected to benefit the disadvantaged. Rawls argues that his principles are more morally justified than the utilitarian principles because his will never condone institutions such as slavery, whereas this need not be the case with utilitarian ethics. In such a situation, a utilitarian would simply weigh all the benefits and all the losses, so a *priori* we cannot exclude a configuration
