Reprint Edition with Updation of Sample Question Papers Only | Typesetting by: Competent Computers | Printed at: Novelty Printer

Notes:

1. For the best & up-to-date study & results, please prefer the recommended textbooks/study material only.
2. This book is just a Guide Book/Reference Book published by NEERAJ PUBLICATIONS based on the suggested syllabus by a particular Board/University.
3. The information and data etc. given in this Book are from the best of the data arranged by the Author, but for the complete and up-to-date information and data etc. see the Govt. of India Publications/textbooks recommended by the Board/University.
4. Publisher is not responsible for any omission or error though every care has been taken while preparing, printing, composing and proof reading of the Book. As all the Composing, Printing, Publishing and Proof Reading, etc. are done by Human only and chances of Human Error could not be denied. If any reader is not satisfied, then he is requested not to buy this book.
5. In case of any dispute whatsoever the maximum anybody can claim against NEERAJ PUBLICATIONS is just for the price of the Book.
6. If anyone finds any mistake or error in this Book, he is requested to inform the Publisher, so that the same could be rectified and he would be provided the rectified Book free of cost.
7. The number of questions in NEERAJ study materials are indicative of general scope and design of the question paper.
8. Question Paper and their answers given in this Book provide you just the approximate pattern of the actual paper and is prepared based on the memory only. However, the actual Question Paper might somewhat vary in its contents, distribution of marks and their level of difficulty.
9. Any type of ONLINE Sale/Resale of "NEERAJ IGNOU BOOKS/NEERAJ BOOKS" published by "NEERAJ PUBLICATIONS" on Websites, Web Portals, Online Shopping Sites, like Amazon, Flipkart, Ebay, Snapdeal, etc. is strictly not permitted without prior written permission from NEERAJ PUBLICATIONS. Any such online sale activity by an Individual, Company, Dealer, Bookseller, Book Trader or Distributor will be termed as ILLEGAL SALE of NEERAJ IGNOU BOOKS/NEERAJ BOOKS and will invite legal action against the offenders.
10. Subject to Delhi Jurisdiction only.

© Reserved with the Publishers only.

Spl. Note: This book or part thereof cannot be translated or reproduced in any form (except for review or criticism) without the written permission of the publishers.

Get Books by Post (Pay Cash on Delivery)

If you want to Buy NEERAJ BOOKS for IGNOU Courses then please order your complete requirement at our Website www.neerajbooks.com . where you can select your Required NEERAJ IGNOU BOOKS after seeing the Details of the Course, Name of the Book, Printed Price & the Cover-pages (Title) of NEERAJ IGNOU BOOKS.

While placing your Order at our Website www.neerajbooks.com You may also avail the Various "Special Discount Schemes" being offered by our Company at our Official website www.neerajbooks.com.

We also have "Cash of Delivery" facility where there is No Need To Pay In Advance, the Books Shall be Sent to you Through "Cash on Delivery" service (All The Payment including the Price of the Book & the Postal Charges etc.) are to be Paid to the Delivery Person at the time when You take the Delivery of the Books & they shall Pass the Value of the Goods to us. We usually dispatch the books Nearly within 3-4 days after we receive your order and it takes Nearly 4-5 days in the postal service to reach your Destination (In total it take nearly 8-9 days).

QUESTION PAPER

*Exam Held in
February – 2021*

(Solved)

COMPUTER BASICS AND PC SOFTWARE

B.C.S.-11

Time: 3 Hours]

[Maximum Marks : 100

(Weightage : 75%)

Note: Question No. 1 compulsory. Attempt any three questions from the rest.

Q. 1. (a) Perform the following:

(i) Convert the number $(16.25)_{10}$ to binary.

Ans. Converting 16.25_{10} in binary system here so:

Whole part of a number is obtained by dividing on the basis new

$$\begin{array}{r} 16 \overline{) 2} \\ -16 \overline{) 8} \quad 2 \\ \hline 0 \quad -8 \overline{) 4} \quad 2 \\ \quad \quad \quad 0 \quad -4 \overline{) 2} \quad 2 \\ \quad \quad \quad \quad \quad 0 \quad -2 \overline{) 1} \quad 1 \\ \quad \quad \quad \quad \quad \quad \quad \quad 0 \end{array}$$

← direction of gaze

Happened: $16_{10} = 10000_2$

The fractional part of number is found by multiplying on the basis new:

$$\begin{array}{r} 0 \quad .25 \\ \hline 0 \quad 5 \\ \hline 1 \quad 0 \end{array}$$

↑ direction of gaze

Happened: $0.25_{10} = 0.01_2$

Add up together whole and fractional part here so:

$$10000_2 + 0.01_2 = 10000.01_2$$

Result of converting:

$$16.25_{10} = 10000.01_2$$

(ii) Convert the number $(1011\ 1010)_2$ to decimal.

Ans. $(10111010)_2 = (186)_{10}$

Step by Step Solution

Step 1: Write down the binary number:

10111010

Step 2: Multiply each digit of the binary number by the corresponding power of two:

$$1 \times 2^7 + 0 \times 2^6 + 1 \times 2^5 + 1 \times 2^4 + 1 \times 2^3 + 0 \times 2^2 + 1 \times 2^1 + 0 \times 2^0$$

Step 3: Solve the powers:

$$1 \times 128 + 0 \times 64 + 1 \times 32 + 1 \times 16 + 1 \times 8 + 0 \times 4 + 1 \times 2 + 0 \times 1 = 128 + 0 + 32 + 16 + 8 + 0 + 2 + 0$$

Step 4: Add up the numbers written above:

$$128 + 0 + 32 + 16 + 8 + 0 + 2 + 0 = 186.$$

So, 186 is the decimal equivalent of the binary number 10111010.

(iii) Convert the number $(ABC)_{16}$ to binary.

Ans. You enter the number: abc_{16} in Hexadecimal number system and want to translate it into Binary.

To do this, at first translate it to decimal here so:

$$abc_{16} = 10.16^2 + 11.16^1 + 12.16^0 = 2560 + 176 + 12 = 2748_{10}$$

Happened: 2748_{10}

Converting 2748_{10} in Binary system here so:

Whole part of a number is obtained by dividing on the basis new

$$\begin{array}{r} 2748 \overline{) 2} \\ - 1374 \overline{) 2} \\ \hline 0 \quad 1374 \overline{) 2} \\ \quad \quad \quad 687 \overline{) 2} \\ \quad \quad \quad \quad \quad 0 \quad 1374 \overline{) 2} \\ \quad \quad \quad \quad \quad \quad \quad 686 \overline{) 2} \\ \quad \quad \quad \quad \quad \quad \quad \quad 1 \quad 171 \overline{) 2} \\ \quad 342 \overline{) 2} \\ \quad 1 \quad 85 \overline{) 2} \\ \quad 170 \overline{) 2} \\ \quad 1 \quad 84 \overline{) 2} \\ \quad 1 \quad 42 \overline{) 2} \\ \quad 1 \quad 42 \overline{) 2} \\ \quad 1 \quad 20 \overline{) 2} \\ \quad 1 \quad 10 \overline{) 2} \\ \quad 0 \quad 10 \overline{) 2} \\ \quad 0 \quad 4 \overline{) 2} \\ \quad 1 \quad 2 \overline{) 1} \\ \quad 0 \end{array}$$

direction of gaze
←

Happened: $2748_{10} = 101010111100_2$

Result of converting:

$abc_{16} = 101010111100_2$

(iv) Convert the number (110011 1001)₂ to hexadecimal.

Ans. First, convert 1100111001_2 into decimal, by using above steps:

$$= 1100111001_2$$

$$= 1 \times 2^9 + 1 \times 2^8 + 0 \times 2^7 + 1 \times 2^6 + 1 \times 2^5 + 0 \times 2^4 + 1 \times 2^3 + 0 \times 2^2 + 1 \times 2^1 + 0 \times 2^0$$

$$= 825_{10}$$

Now, we have to convert 825_{10} to hexadecimal

$$825 / 16 = 51 \text{ with remainder } 9$$

$$51 / 16 = 3 \text{ with remainder } 3$$

$$3 / 16 = 0 \text{ with remainder } 3$$

Then just write down the remainders in the reverse order to get the answer. The binary number 1100111001 converted to hexadecimal is therefore equal to : **339**.

(b) List the input/output devices for the following situations. Also describe the features of the device:

(i) For taking photographs

Ans. For Taking Photographs: A digital camera may be considered both an **input** and **output** device (I/O device) as it can take pictures (**input**).

(ii) Producing output of photograph

Ans. Producing output of photograph: A digital camera may be considered both an **input** and **output** device (I/O device) send them to your computer (**output**).

(iii) Input of voice

Ans. Input Voice: An **input** is any pathway through which an **audio** signal can go IN to the computer. Most obvious is microphone IN or Line IN.

(iv) Output of voice

Ans. Out of Voice: An **output** is any pathway through which an **audio** signal can be sent OUT of a computer. Most obvious is the headphone socket (jack).

(c) What is the role of main memory in a Computer? Why is it called RAM? How is RAM different from ROM?

Ans. Main memory is where programs and data are kept when the processor is actively using them. When programs and data become active, they are copied from secondary memory into main memory where the processor can interact with them. A copy remains in secondary memory.

Main memory is intimately connected to the processor, so moving instructions and data into and out of the processor is very fast.

Main memory is sometimes called **RAM**. RAM stands for **Random Access Memory**. "Random" means that the memory cells can be accessed in any order. However, properly speaking, "RAM" means the type of silicon chip used to implement main memory.

Random Access Memory (RAM) is used to store the programs and data being used by the CPU in real-time. The data on the random access memory can be read, written, and erased any number of times. RAM is a hardware element where the data being currently used is stored. It is a volatile memory.

Types of RAM

1. Static RAM, or (SRAM) which stores a bit of data using the state of a six transistor memory cell.

2. Dynamic RAM, or (DRAM) which stores a bit data using a pair of transistor and capacitor which constitute a DRAM memory cell.

Read Only Memory (ROM) is a type of memory where the data has been prerecorded. Data stored in ROM is retained even after the computer is turned off ie, non-volatile.

Types of ROM

1. Programmable ROM, where the data is written after the memory chip has been created. It is non-volatile.

2. Erasable Programmable ROM, where the data on this non-volatile memory chip can be erased by exposing it to high-intensity UV light.

3. Electrically Erasable Programmable ROM, where the data on this non-volatile memory chip can be electrically erased using field electron emission.

4. Mask ROM, in which the data is written during the manufacturing of the memory chip.

(d) You have attached a new printer to your computer. Which software will you require so that printer is installed correctly and starts to print. List features of the required computer software.

Ans. In Windows, search for and open Control Panel. Click Devices and **Printers**, and then click Add a **printer**. On the Choose a device or **printer** to add to this **PC** window, select your **printer**, Go to

COMPUTER BASICS AND PC SOFTWARE

BASICS OF COMPUTER HARDWARE

Computer—their Origin and Applications

INTRODUCTION

With the advent of Information and Communication Technology (ICT) use of computer has increased in every phase of our life. **A computer is a programmable machine that receives input, stores and manipulates data, and provides output in a useful format.** Basically computers were meant to ‘compute’, to perform large calculations in seconds with accuracy. But now the machine is doing wonders. Gone are the days when computers were used only to calculate or compute, now you can hardly find any area untouched by the use of computer. We can see that computers are replacing the manual style of working. Keeping in view the overwhelming use of computer in almost every field such as banking, railways, commerce, book keeping, ticketing, billing, education, etc. It becomes a necessity to get familiar with computer.

This chapter will introduce you to the origin of computer, computer generations, computer system, its components, integrated circuits, operating system, current applications of computer and limitations of computers.

CHAPTER AT A GLANCE

ORIGIN OF COMPUTERS

Initially, computers were invented to compute, and the basic role of computers was to calculate,

or to perform lengthy calculations in seconds. In order to count large numbers various systems of numeration were generated, such as:

- Babylonian System of Numeration,
- Greek System of Numeration,
- Roman System of Numeration, and
- Indian System of Numeration (decimal system of numeration 0-9).

But we should be proud to know that our Indian System of Numeration has been accepted universally.

1. Abacus: Since civilizations began, many of the advances made by science and technology have depended upon the ability to process large amounts of data and perform complex mathematical calculations. For thousands of years, mathematicians, scientists and businessmen have searched for computing machines that could perform calculations and analyze data quickly and efficiently. One such device was the abacus. The literal meaning of Abacus is the calculating board. The Chinese hold the credit of inventing ‘abacus’.

The abacus can be thought of a counting frame, with vertical wires, with seven beads on each wire. A horizontal divider separates the top two beads from the bottom five, sometimes referred to as the heaven and the earth beads. The user manipulates the beads by using the principle of positional weight of beads on a rack.

2. **Napier's Bones:** Napier's Bone is a device invented in 1617 A. D. by John Napier, a mathematician. He invented the logarithms to reduce any multiplication problem.

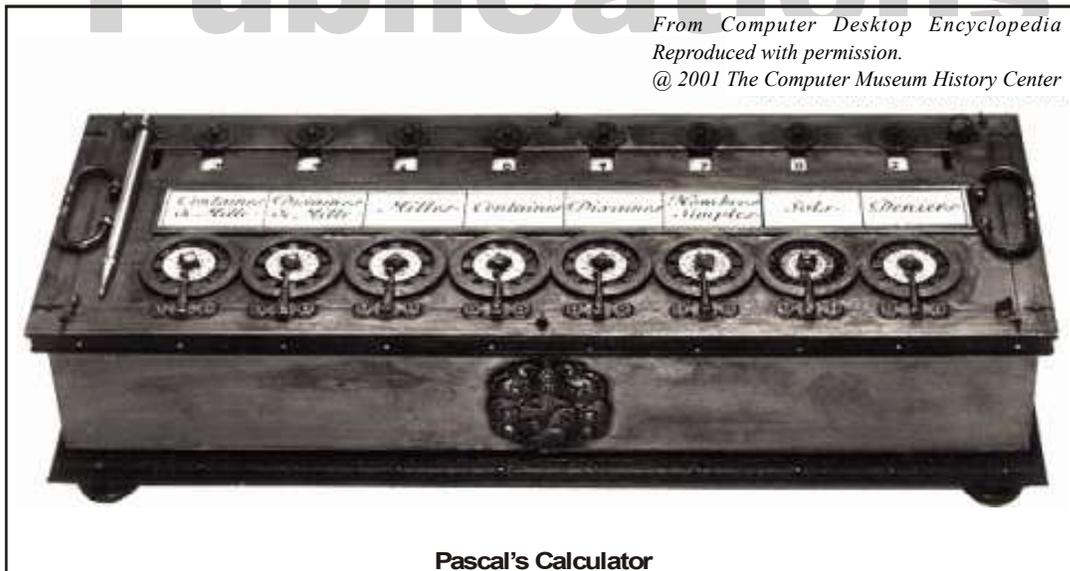

0	1	2	3	4	5	6	7	8	9
0/0	0/2	0/4	0/6	0/8	1/0	1/2	1/4	1/6	1/8
0/0	0/3	0/6	0/9	1/2	1/5	1/8	2/1	2/4	2/7
0/0	0/4	0/8	1/2	1/6	2/0	2/4	2/8	3/2	3/6
0/0	0/5	0/1	0/5	2/0	2/5	3/0	3/5	4/0	4/5
0/0	0/6	1/2	1/8	2/4	3/0	3/6	4/2	4/8	5/4
0/0	0/7	1/4	2/1	2/8	3/5	4/2	4/9	5/6	6/3
0/0	0/8	1/6	2/4	3/2	4/0	4/8	5/6	6/4	7/2
0/0	0/9	1/8	2/7	3/6	4/5	5/4	6/3	7/2	8/1

Image of Napier's bones

3. **Slide Rule:** Slide rule, is a mechanical analog computer. It was developed by English mathematician E. Gunter. The slide rule is used primarily for multiplication and division, and also for functions such as roots, logarithms and trigonometry, but it is not normally used for addition or subtraction.

4. Pascal's Calculator: The credit of building calculator goes to Blaise Pascal, a French mathematician and scientist. The machine was also called Pascaline, it could add and subtract directly and multiply and divide by repetition.

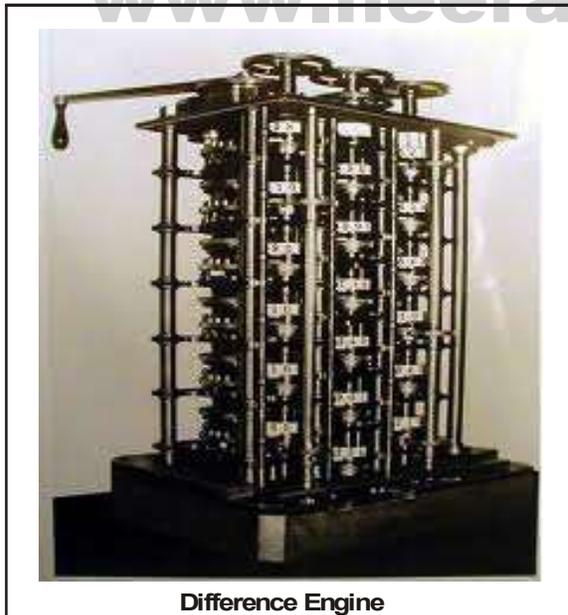

5. Leibniz's Multiplication and Dividing Machine: German mathematician Gottfried Wilhelm Leibniz invented a digital calculator around 1672 which was called the step reckoner. It was the first calculator that could perform all four arithmetic operations: addition, subtraction, multiplication and division.

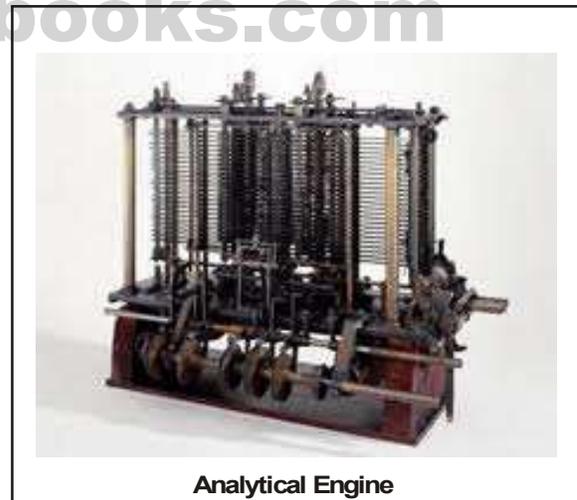

Step Reckoner

6. Difference Engine: Charles Babbage, an English mathematics professor told that all the mathematical operations, even the most complex ones, can be broken down into simple operations. This concept could be used to make it able to be carried out by a machine in loop. This machine used the decimal number system and was powered by cranking a handle. It could be called the first step towards the creation of computers. That is why he is called as the Father of the Computers.

7. The Analytical Engine: Due to some reasons Babbage left working on Difference Engine and he started working on Analytical Engine which was even closer to the concept of today's computers. Because it was a proposed mechanical general-purpose computer. It had an arithmetical unit, control flow in the form of conditional branching and loops, and an integrated memory.

Difference Engine

Analytical Engine

8. Mechanical and Electrical Calculator: Calculators are very popular device for arithmetic calculation. Calculators were developed in the 19th
